**Cardinal Resources Managing Director Archie Koimtsidis, based on site in Ghana, stated:**

"This drilling campaign will provide us with an excellent opportunity to confirm what we believe to be very strong positive potential along strike within the mineralised trend.

"Cardinal has divided the drill program into two distinct and exciting phases. Phase 1 will determine extensions to the current mineralisation and Phase 2 will evaluate the monzonite granitoid quartz stockworks where there are shallow active artisanal workings.

"We are very positive that we will have strong news flow as the drilling progresses and results become available."

Significant historical drilling results include:

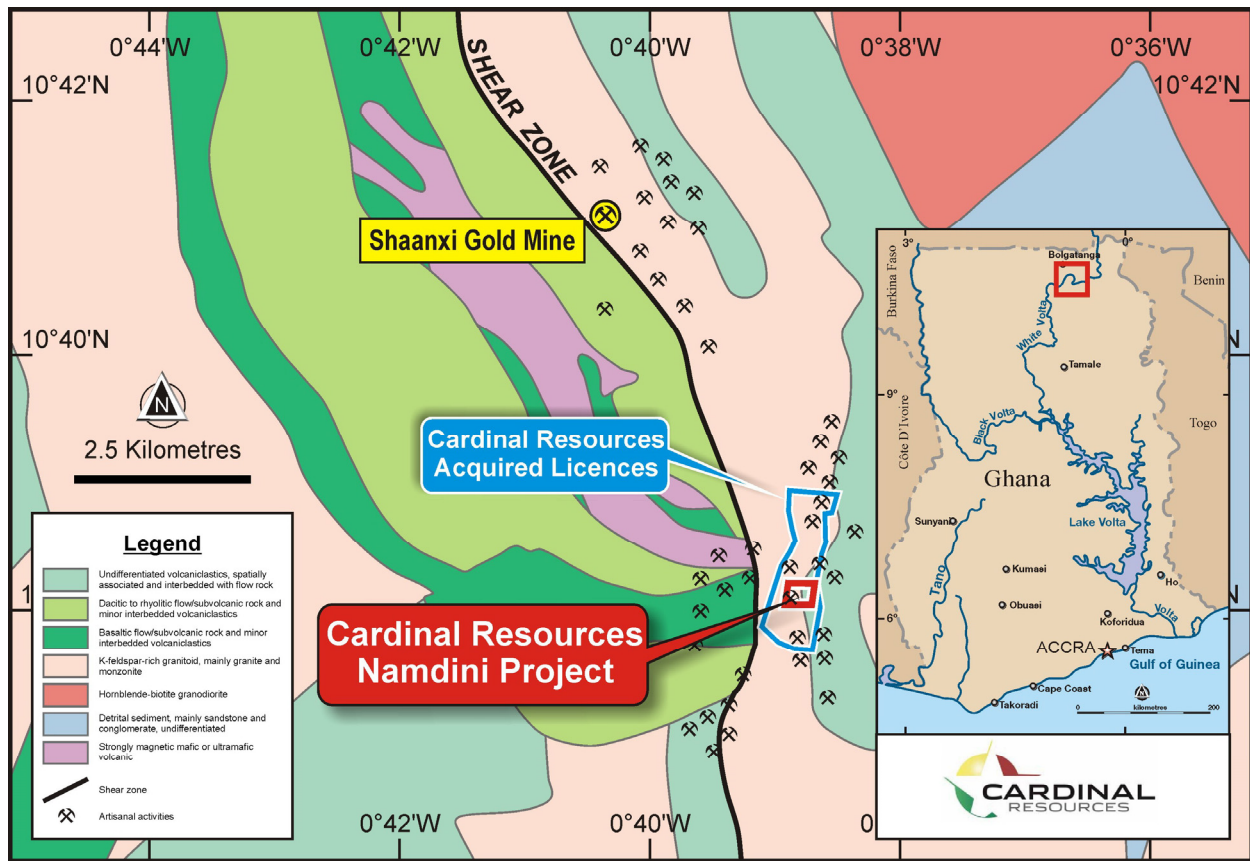

- 51m @ 3.58 g/t from 85m vertical
- 43m @ 2.27 g/t from 87m vertical

**MONITORING OF DRILLING PROGRAM**

Cardinal's technical and management team evaluates all of the available data on a daily basis with the main focus being the expansion of the gold potential for the expanded area.

Cardinal is the owner and operator of its own drill rig and has established an express assaying service with its drilling results, enabling the Company to continuously improve its drill plan strategy as new information becomes available.

The Company will continue drilling selective holes, submitting the samples and be on standby as results are received. Once the results have been assessed Cardinal can plan further drill holes to maximise expansion of the gold potential along strike within the expanded areas around Namdini.
