

ASX Announcement

12 December 2011

AIRBORNE SURVEY

Ridge Resources Ltd ("Ridge" or the "Company" (ASX: RID)) is pleased to advise that independent geological consultant Dr Joseph Drake-Brockman has completed a field trip at the Company's Mt Alexander project.

During the five day field trip Dr Drake-Brockman identified several anomalous radioactive outcrops at both the Mt Alexander and Granite Bore prospects.

Following advice from Dr Drake-Brockman, Ridge has engaged Aerosystems Pty Ltd to undertake an airborne survey comprising of radiometric and magnetic surveys to:

- fully define three known surface anomalies;
- evaluate the Kilba Granite for any subtle retrogressed zones that may be uranium bearing;
- evaluate the Mount Alexander trend for any repetitions of the known mineralization, including any subtle features that may represent buried ore shoots; and
- test quartzite outcrops for any repetitions of the Granite Bore style mineralization.

The airborne survey is due to commence on 13 December 2011. The Company will continue to evaluate historical data including detailed prospects maps and assess any non-uranium potential within the tenement.

Competent Persons Statement

Information in this report that relates to Exploration Results and comments on the resource estimates is based on information compiled by Mr Dave Kelly, who is a Member of The Australasian Institute of Mining and Metallurgy. Mr Kelly has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2004 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Kelly consents to the inclusion in this report of the statements based on his information in the form and context in which it appears.
